

Streamline your Data Migration Projects with KMig™

Data Migration Challenges

Data Migration Projects, for many reasons, are highly complex and inherently risky. Throw in frequent requirement changes, limited code reusability, iterative process and numerous last-minute changes, and the end result is that many of these projects eventually run over-budget and are well behind schedule. In fact, according to a Gartner survey, 64% of all data migration projects are delivered late, and 37% are over-budget. Ask yourself this: Is the tool you are using to move data flexible enough to accommodate changing business requirements without much effort? Most of all, will it overcome the inherent challenges and help in completing the activities as planned?

Birlasoft Solution

Birlasoft has devised a next-generation data conversion tool to take care of all your data migration needs for EBS applications. Its unique architecture and pre-seeded templates make it quick to deploy into any data migration project. The tool is also flexible to accommodate any changes in the pre-seeded templates without requiring any code modification efforts

Features

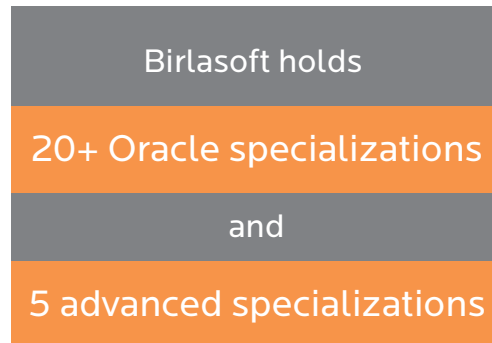

- Supports all Oracle EBS-specific open interfaces and APIs
- Program logic is loosely coupled with Data Migration object via configurable rules
- User defined rules for validating business data
- Elaborate error reporting & handling capabilities
- User friendly interface to review failed data records, rectify and resubmit

Differentiators

- Application version agnostic data migration capability
- Quick deployment and execution
- Simple process – Functional team can own data migration
- Highly flexible – can accommodate requirement changes without code changes
- Supports both types of data migration projects (Big bang and Trickle migration)

Birlasoft Oracle Practice provides Oracle and process-based expertise to Manufacturing, Automotive and Energy industries. More than 2,000 Oracle professionals deliver a powerful combination of industry experience and Oracle knowledge in the following areas:

- E-Business Suite
- JD Edwards
- Agile PLM
- CRM On Demand
- Value Chain Planning
- Value Chain Execution
 - Oracle Configurator
 - Warehouse Management
 - Oracle Transportation Management
- Business Intelligence and Hyperion
- Fusion Middleware
- Global Services and Support
